Wabash Capstone Project Notes 07

By: John Danison

What Did I Say I Would Do This Week?

- Continue to support lab testing as requested.
- Continue to develop data offloading software.

What I Have Done Over The Past Week

- Performed lab testing on Kingpin assembly and on steel cutout.
- Added features to Wabash data offloading software.
- Attended meetings and class.
- Updated schematics and recorded Gate 5.5 presentation.

Lab Testing – Dudley UTM Machine

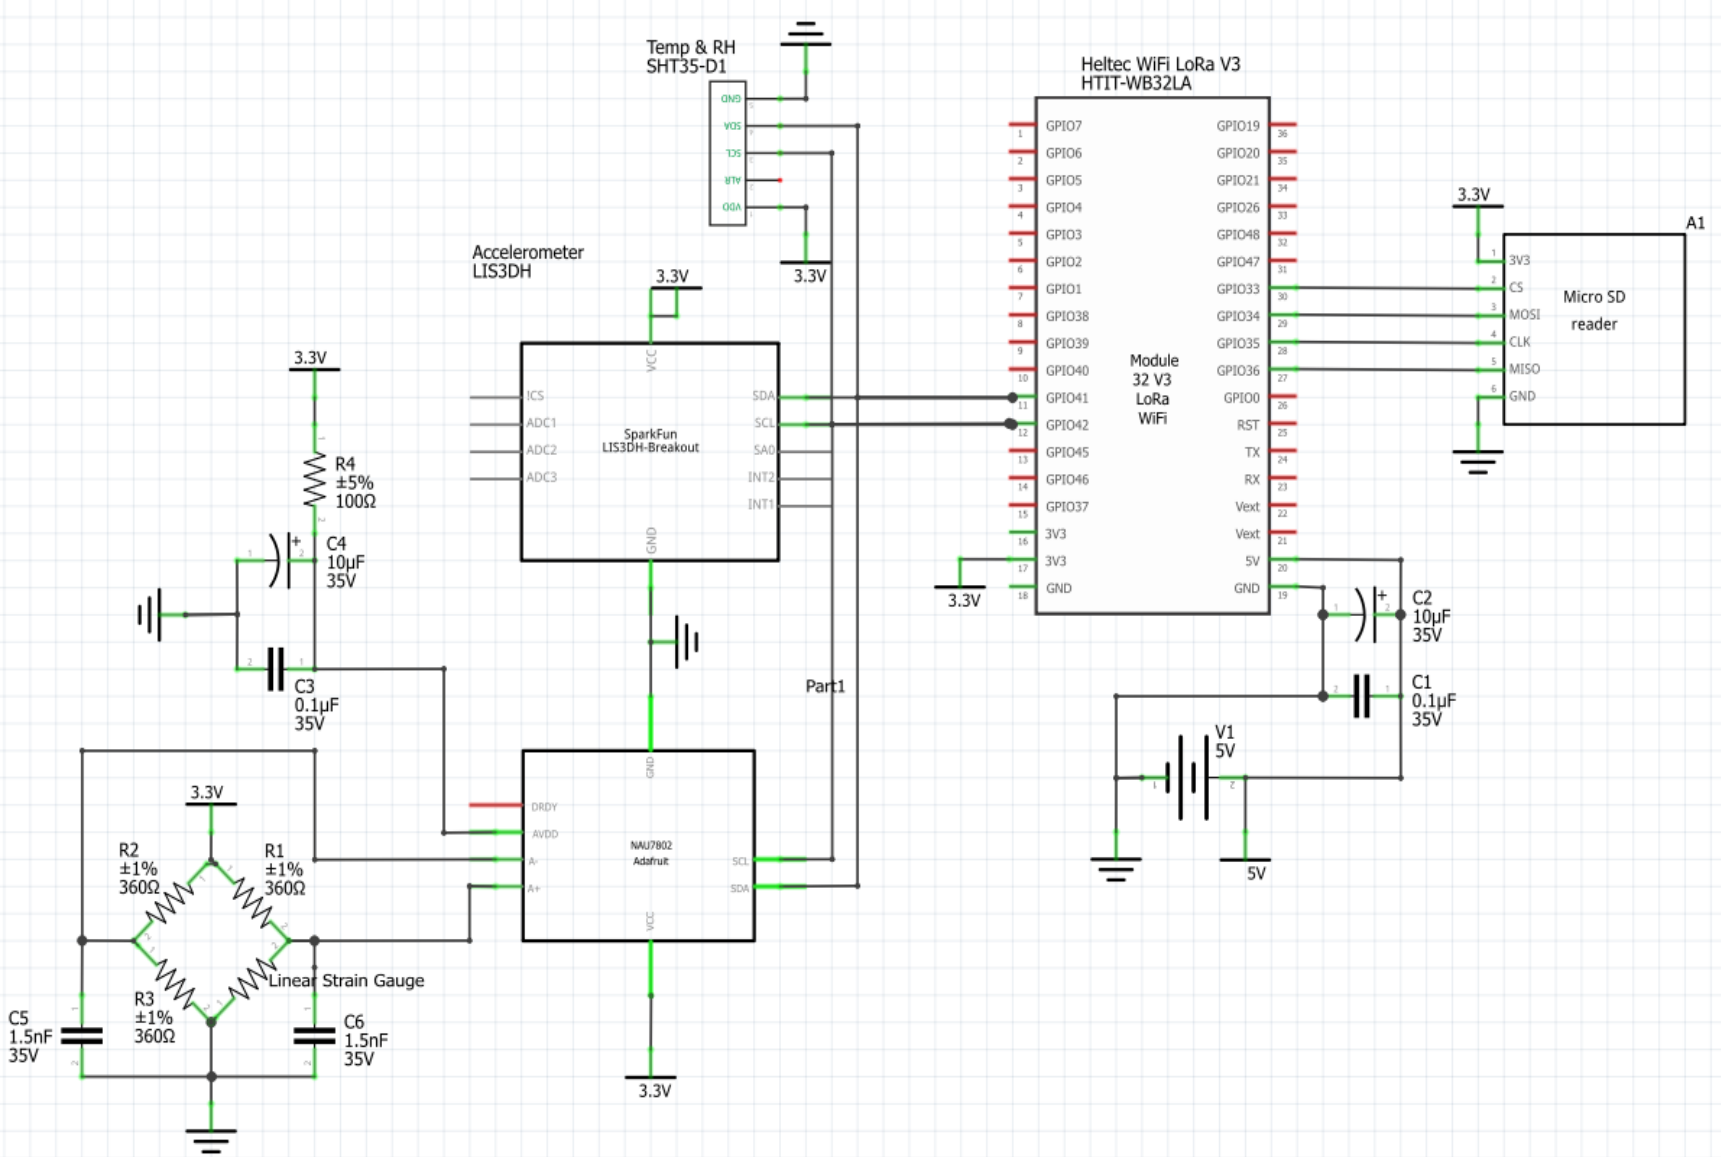
Demo Video can be found at the end of the Gate 5.5 presentation submission.

The video was giving me issues here unfortunately.

Schematic Update – Added Capacitors



Did I Do What I Say I Would Do?

I feel that I accomplished everything that I said I would do over these past couple weeks.

The data offloading software is well under development is still going well.

I attended all lectures, labs, and meetings w/ the client.

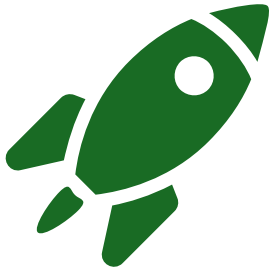
Plans For Upcoming Weeks

High Level

Continue to develop data offloading software.

Continue to show up to class.

Continue to support lab testing as requested by the team.



By EOW:

Continue to add client feature requests in data offloading software.
